## Black Polyester Fabric - FR - Raven

### Available Colours:

Black

Product code:	KBT11870 - U116
<b>Selected Colour:</b>	<b>Black</b>
Width:	192 cm
Price:	£8.99/mtr

### Description:

This is a **class 0 synthetic fire retardant fabric**; with this specification it can resist a fire from spreading, particularly over the outer walls of high-rise buildings.

It is a **100% blackout Polyester fabric**, and is classed as an inherent flame-retardant fabric, meaning it hasn't had any resistant treatments added to it as it is naturally fire retardant from the way it is structured.

### This fabric can be useful in many different ways:

- Construction
- The furniture trade
- Displays
- Backdrops
- Stage sets
- Exhibition stands
- School halls, colleges, universities
- Partition areas
- Industrial work wear

- Uniforms for fire fighters, air force pilots
- Tents and parachute fabric
- Professional motor racing apparel

It is ideal to use non-flammable fabrics like this one in a building as it:

- Slows down the flame, or even causes the fire to self-extinguish, therefore limiting the spread
- Minimises the build up of heat which again will prevent the fire rapidly developing

If holding an exhibition, or a show, this will increase the safety of the event if fire retardant fabrics are used. This applies in the same way to event holders if tents are needed; make a clever choice and kit yourself out with fire retardant fabrics!

For fire fighters, air force pilots, and other types of trade, workwear can be even safer if made from a material like this one with these qualities.

**Certified by Gort Flameproofing Services.**
