| Blackout silver                           | P2343_15_11                      |

The sampling was supplied by the client. The test department is not informed about the sampling procedure.

**Analysis content:**

- (1) Remission and transmission in the visible light range in accordance with DIN EN 410:April 2011
- (2) Remission and transmission in the global radiation range in accordance with DIN EN 410:April 2011
- (3) Calculation of the total energy permeability degree  $g_t$  of window system with sun protective materials, following DIN EN 13363-1 2007 and approximated Calculation of reduce factor  $F_c$  following DIN EN 14501 February 2006
- (4) Direct und diffuse transmission measurement in the visible light and global range in accordance with DIN EN 410 April 2011
- (5) Classification of anti-dazzle effect in accordance with DIN EN 14501, February 2006 (Tab. 8)
- (6) Thermal efficiency measurement given by different combinations of fabrics (not in the accreditation methods set)

**Conditions for optical tests:**

| test parameter                             | symbol           | range of radiation                |
|--|------------------|-----------------------------------|
| light transmission degree                  | $\tau_{v,n-h}$   | 380...780 nm (standard light D65) |
| light remission degree                     | $\rho_{v,n-h}$   | 380...780 nm (standard light D65) |
| light absorption degree                    | $\alpha_v$       | 380...780 nm                      |
| UV- transmission degree                    | $\tau_{uv}$      | 280...380 nm (UV-radiation)       |
| solar transmission degree                  | $\tau_{e,n-h}$   | 280...2500 nm (global radiation)  |
| solar remission degree                     | $\rho_{e,n-h}$   | 280...2500 nm (global radiation)  |
| Solarabsorptionsgrad                       | $\alpha_e$       | 280...2500 nm                     |
| normal / direct light transmission degree  | $\tau_{v,n-n}$   | 380...780 nm (standard light D65) |
| normal / diffuse light transmission degree | $\tau_{v,n-dif}$ | 380...780 nm (standard light D65) |

Equipment: Spectral photometer Lambda 900, PERKIN - ELMER Corp., USA  
150 mm sphere, 8° slope of the sample area to the light incidence axis

Description of the classification for visual comfort, so sight protection is one parameter in it, is given in DIN EN 14501, 2006, table 5 as following:

| Class | 0                 | 1            | 2               | 3           | 4                |
|-------|-------------------|--------------|-----------------|-------------|------------------|
|       | very small effect | small effect | moderate effect | high effect | very high effect |

#### Test results:

##### (1) Light range

##### UV-range

| Code     | light transmission degree | light remission degree | light absorption coefficient | UV-transmission degree |
|----------|---------------------------|------------------------|------------------------------|------------------------|
| P2343_15 | $\tau_{v,n-h}$            | $\rho_{v,n-h}$         | $\alpha_v$                   | $\tau_{UV}$            |
| 5        | 0,0340                    | 0,3857                 | 0,5803                       | 0,0200                 |
| 6        | 0,0000                    | 0,6570                 | 0,3430                       | 0,0010                 |
| 7        | 0,0100                    | 0,6620                 | 0,3280                       | 0,0050                 |
| 8        | 0,2420                    | 0,6320                 | 0,1260                       | 0,1850                 |
| 10       | 0,7110                    | 0,2573                 | 0,0317                       | 0,5893                 |
| 11       | 0,0000                    | 0,6600                 | 0,3400                       | 0,0010                 |

##### (2) Global radiation range

| Code     | solar transmission degree | solar remission degree | solar absorption coefficient |
|----------|---------------------------|------------------------|------------------------------|
| P2343_15 | $\tau_{e,n-h}$            | $\rho_{e,n-h}$         | $\alpha_e$                   |
| 5        | 0,0597                    | 0,4500                 | 0,4903                       |
| 6        | 0,0010                    | 0,6420                 | 0,3570                       |
| 7        | 0,0210                    | 0,6670                 | 0,3120                       |
| 8        | 0,2420                    | 0,6330                 | 0,1250                       |
| 10       | 0,7177                    | 0,2523                 | 0,0300                       |
| 11       | 0,0010                    | 0,6450                 | 0,3540                       |

##### (3) Total energy permeability degree $g_t$ and reduce factor $F_c$

| Code     | $g_t$ | $F_c$ |
|----------|-------|-------|
| P2343_15 |       |       |
| 5        | 0,45  | 0,64  |
| 6        | 0,37  | 0,52  |
| 7        | 0,36  | 0,51  |
| 8        | 0,38  | 0,55  |
| 10       | 0,57  | 0,82  |
| 11       | 0,36  | 0,52  |

F<sub>c</sub> and g<sub>t</sub> results are valid for the following presumptions in accordance with DIN EN 13363-1:

- Double glass with thermal protective covering , thermal permeability degree U = 1,6 W/m<sup>2</sup>K and total energy permeability degree g = 0,70
- sun protective material inside, closed.

#### (4) Classification:

| Code     | light transmission degree normal / hemispheric | light transmission degree normal / diffuse | light transmission degree normal / normal | class anti-dazzle effect |
|----------|--|--|---|--------------------------|
| P2343_15 | $\tau_{v,n-h}$                                 | $\tau_{v,n-diff}$                          | $\tau_{v,n-n}$                            |                          |
| 5        | 0,0340   | 0,0323                                     | 0,0017                                    | <b>2</b>                 |
| 6        | 0,0000   | 0,0000                                     | 0,0000                                    | <b>4</b>                 |
| 7        | 0,0110   | 0,0110                                     | 0,0000                                    | <b>4</b>                 |
| 8        | 0,2383   | 0,1490                                     | 0,0893                                    | <b>0</b>                 |
| 10       | 0,7110   | 0,3363                                     | 0,3747                                    | <b>0</b>                 |

#### (6) Thermal efficiency measurement

The equipment had been constructed in accordance with DIN EN ISO 8990. It is able to measure thermal efficiency of window – air – fabric systems. The materials had a distance of 100mm to the glazing (4mm one sheet glazing) in these tests.

Nominal temperature for the stationary measurement condition: 21°C inside box (heated)

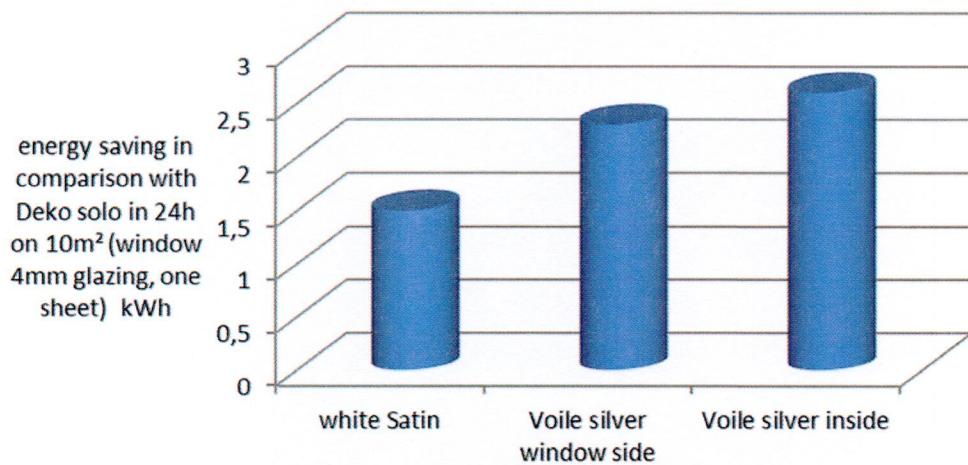

6°C outside box (cooled)

picture 1: opened measurement box including fabric sample, window and temperature sensors

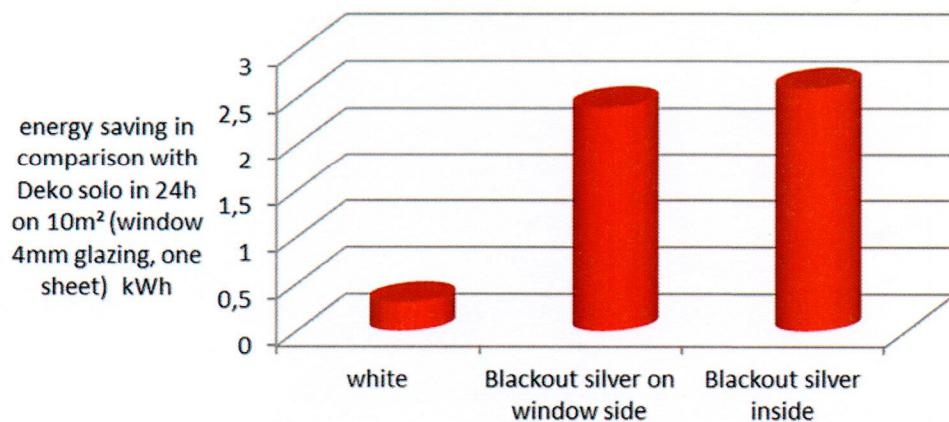

Measurement occurs about the keeping power for stationary condition (error in measurement 0,7W).

### **fabric for decoration, lined with Voile silver**

### **fabric for decoration, lined with BlackOut silver**

The detailed results are to be found in the appendix (test protocols in German).

The test results are referring to the submitted samples.

The materials received within this order will be kept for a maximum time of 6 month.

The testing period is defined as timeframe between receipt of samples and issue date of test report.

These test report is not allowed to copy in parts.

Dr. Matthias Mägel
