Available Colours:

Product code: KBT13429-B67
Selected Colour: **Alpha Red**
Width: 138cm
Price: £11.99/mtr

Description:

Self Adhesive Display Board Fabric Loop Nylon Fabric refers to a specialized type of fabric designed for use in displays where hook-and-loop fastening systems (like Velcro) are utilized. This fabric is constructed using brushed nylon, which enhances its durability and texture. The term "hook receptive" indicates that this fabric is compatible with the hook side of hook-and-loop fasteners, allowing for easy attachment of various display materials such as posters, signs, or graphics. This fabric's properties make it an ideal choice for creating versatile and reusable display setups in various settings, including trade shows, exhibitions, retail environments, and educational institutions.

With a self adhesive backing makes this fabric ideal to stick on to any dry, clean dust free flat surface.

Here are some potential uses for this type of fabric:

Display Boards: It can be used as a surface material for display boards or panels where items can be attached using hook-and-loop fasteners. This is commonly seen in trade shows, presentations,

Wall Organizers: This fabric can be incorporated into wall organizers or bulletin boards where notes, photos, or other items can be easily attached and removed using hook-and-loop fasteners.

Craft Projects: Crafters may use this fabric as a base for various projects where items need to be temporarily attached and removed, such as fabric wall hangings, interactive displays, or customized organizers.

Educational Materials: Teachers and educators might use this fabric to create interactive learning materials, such as tactile displays or charts where students can attach items to demonstrate understanding or interact with the content.

Retail Displays: Retailers could utilize this fabric in displays for showcasing products that need to be easily rearranged or replaced, such as clothing, accessories, or small items.

DIY Projects: Hobbyists and DIY enthusiasts might incorporate this fabric into various projects where a versatile, reusable attachment method is needed, such as custom bags, pouches, or organizers.

Medical and Rehabilitation Equipment: In medical settings, this fabric could be used in equipment such as orthopaedic braces or splints, where adjustable straps and attachments are necessary for customization and comfort.

Costumes and Apparel: Costume designers or apparel makers might use this fabric in garments where removable attachments or accessories are required, allowing for versatility in design and styling.

In schools and colleges, classrooms are dynamic environments where organization, communication, and creativity are paramount. Here's how you can effectively utilize Hook Receptive Foam Backed Fabric in these spaces:

Bulletin Boards: Transform classroom walls into interactive learning hubs by covering bulletin boards with Hook Receptive Foam Backed Fabric. This provides a soft, cushioned surface perfect for pinning up notices, announcements, student work, and educational materials using pins or hook-and-loop fasteners.

Display Areas: Create designated display areas where students can showcase their projects, artwork, and achievements. Mount the fabric on display boards or partitions to provide a visually appealing backdrop that's both functional and inviting. Encourage student engagement by allowing them to easily attach and rearrange their work using pins or hooks.

Interactive Learning Stations: Foster collaborative learning and engagement by incorporating interactive learning stations into your classroom layout. Cover table tops or panels with the fabric to create versatile display and activity areas where students can affix learning aids, visual aids, and interactive elements using hook-and-loop attachments.

Organization and Planning: Enhance classroom organization and planning by utilizing the fabric to create custom organizers and planners. Cover sections of walls or bulletin boards with the fabric to serve as dedicated areas for posting schedules, calendars, lesson plans, and important reminders. Utilize hooks or pins to easily attach and update information as needed.

Themed Learning Walls: Bring lessons to life by designing themed learning walls using Hook Receptive Foam Backed Fabric. Cover sections of walls with the fabric to create immersive learning environments related to specific subjects or topics. Students can contribute to these interactive displays by pinning up relevant materials, illustrations, and references.

Flexible Seating Arrangements: Incorporate the fabric into flexible seating arrangements to enhance comfort and functionality. Cover seat cushions or backrests with the fabric to provide a soft, cushioned surface that's also hook receptive. This allows students to personalize their seating area by attaching accessories, such as storage pouches or visual aids, using hook-and-loop attachments.

By leveraging the versatility and functionality of Hook Receptive Foam Backed Fabric, schools and colleges can create dynamic learning environments that promote engagement, organization, and creativity in the classroom.
